

Interconnection Forum for Distributed Generation

Save the Date—March 23, 2017
Stayer Center at Marian University
Fond du Lac, Wisconsin

The distributed generation landscape has changed since the rules for distributed generation (PSC 119) were adopted in 2004. Data has been collected on installations over the years that reflect a growing market and technical challenges. The time is right for a review of what's working, what's not, and what we can do to improve the process as the market continues to grow and evolve.

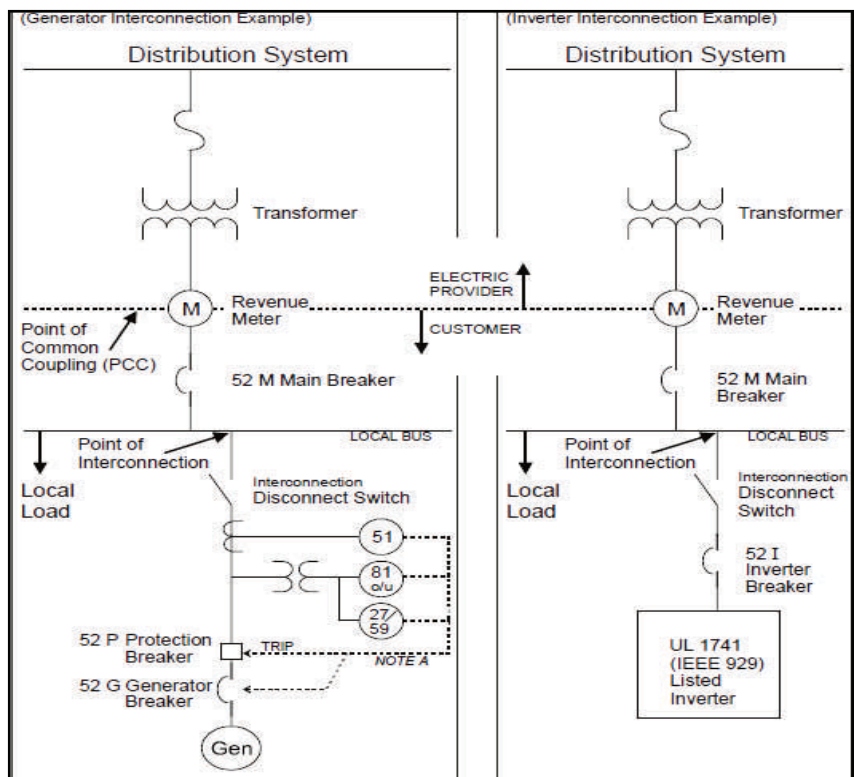

Please join us in an interconnection forum featuring representatives of the Wisconsin electric utilities, developers, contractor-installers, engineers and distributed generation owners. Let's discuss what steps should be taken to improve the interconnection process in Wisconsin.

Highlights

- Market / Technical Changes
- Utility & Installer Panel Discussion
- Ensuring a Complete Application
- Improving the Interconnection Process
- Interconnection Survey

Who Should Attend

- Utility engineers that review DG applications
- Installers & developers that work in Wisconsin
- Others involved in technical interconnection issues
